Our mission

Our mission is to convince customers. Convince them that our motors work for many hours with a service intervals and the highest user experience. If we succeed with this mission, we will advance on our vision of a better eco-friendly future.

Purpose

Our purpose is to help as many people and companies as possible with the transition to electric boating.

Quality control

In order to guarantee the quality of our products, our production is located in the Netherlands. Not only is the production quality higher here, the monitoring of the quality is also a lot easier.

Accessories

We want to support our customers from start to finish. To realize this, we offer a wide range of accessories which increases the user friendliness of our motors. To provide the best customer experience, our accessories work efficiently with all our rim drive products.

Worldwide

We are operating in more and more markets in different countries. We are proud that our motors continue to be part of countless projects and applications around the world.

Sustainable

Our organization actively contributes to a sustainable world by developing innovative solutions for environmental challenges.

Did you know?

- A Rim Drive contains no oils and sealings.
- Rim Drive motors were founded in 1929.
- Our systems are also compatible with most other marine brands.
- We are a CO2 neutral company due to compensation via treesforefree.nl
- We design and develop all parts in the Netherlands.
- A Rim Drive accelerates within 1.5 seconds from zero to full RPM.

A Revolution in Propulsion

A Rim Drive contains its electric winding in the outer (stator) housing. This housing is casted to avoid any use of sealings. The inner housing which contains the magnetics is also potted to avoid any internal corrosion. The bearing system is water lubricated and will last for thousands of hours by normal use.

The combination of the inlet ring, outlet ring and propeller makes it the most efficient way of propulsion. Each part has been simulated via CFD analysis and intensively tested in real circumstances.

Why a Rim Drive?

- The POD 3.0, 5.0 and 11.0 can be switched easily due to the same mounting pattern.
- Rim Drive 30.0 and 50.0 have the same dimensions.
- Clockwise, counter clockwise and symmetric directions are available for every motor.
- All our products are saltwater resistant to ensure ease of installation for every boat.
- Rim Drives are available in POD, steerable POD, outboard and bow thruster.
- Rim Drive motors are sold in many other countries through our distributors.

An **immediate** acceleration response in comparison with conventional solutions.

A **compact** and **lightweight** design makes our products compatible for the smallest installation.

Because of the **stepless** controlling our rim drive motors can be operated proportionally.

No center shaft **limits** the chance that ropes, or fishing nets will get stuck in the propeller.

Only one rotating part which **reduce** the amount of maintenance.

Propulsion

POD, Steerable POD and outboard system.

POD

The better alternative for an inboard motor

Available in 0.5 - 3.0* - 5.0* - 8.0 - 11.0 -
15.0 - 25.0 - 30.0 - 50.0kW

Also available as a subsea variant

Steerable POD

320 degrees propulsive power for ultimate maneuverability

Available in 0.5 - 3.0* - 5.0* - 8.0 - 11.0 -
15.0 - 25.0 - 30.0 - 50.0kW

Outboard system

The outboard system provide a complete trim and tilt functionality for precise maneuvering

Available in 0.5 - 3.0* - 5.0* - 8.0 - 11.0 -
15.0 - 25.0 - 30.0 - 50.0kW

*The 3.0 and 5.0kW motors are also available in 24V.

Bow thrusters

standard thruster, tunnel set and bow thruster box.

Standard bow thruster

The best solution for continuous running times

Available in 0.5 - 3.0* - 5.0* - 8.0 - 11.0 - 15.0 - 25.0 - 30.0 - 50.0kW

Also available as a subsea variant

Bow thruster tunnel set

A strong stainless steel provides a robust solution for bow thrusters

Available in 3.0* - 5.0* - 8.0 - 11.0 - 15.0 - 25.0 - 30.0 - 50.0kW

Also available as a subsea variant

Bow thruster box

The best solution for continuous running times

Available in 3.0* - 5.0* - 8.0 - 11.0 - 15.0kW

*The 3.0 and 5.0kW motors are also available in 24V.

POD

The better alternative for an inboard motor

Characteristics

Electric propulsion

Minimized components

Low in maintenance

One day installation

Keyswitch included

Electric or hybrid

Integration

New build or refit

Custom made projects

Specs

	POD 0.5	POD 3	POD 5	POD 8	POD 11
Power (kW)*	0.5	3.0	5.0	8.0	11.0
Nominal voltage (V)	48	24 or 48	24 or 48	48	48
Weight (kg)	2.5	3.5	5	14	14
Static thrust (kgf)**	7	31	62	120	156
Salt water resistant	Yes	Yes	Yes	Yes	Yes
Controller included	Yes	Yes	Yes	Yes	Yes

*Motor power is depending on water conditions, usage and installation.

**Will be less for 24V installations.

Simplified but better

A Rim Drive motor is the most simplified motor design which is ever made. But don't confuse simplified with less powerful.

Forget all internal components which are needed for a classic inboard motor!

After finalizing the production process a Rim Drive POD motor is consisting out of only eight parts without any sealing needed.

The newest POD range motors are the most efficient and powerful solution for your medium speed application.

Choose a Rim Drive motor and use the additional space for more batteries to easily realize an 8-hour run time capability.

This is limiting the amount of service even further than any other electric motor.

Most efficient propulsion at cruise speed

97% of the applications doesn't require high speed capabilities. In general high efficiency is needed at cruise speed to guarantee a full-day of pleasure. Up to medium speeds a rim drive is the most efficient propulsion solution available in the market.

POD 5.0

4.0 km/h - 6:00 hr.

7.0 km/h - 4:00 hr.

10.0 km/h - 2:00 hr.

*1x 10kWh RDT battery.

POD 8.0

4.0 km/h - 6:00 hr.

7.0 km/h - 4:00 hr.

12.0 km/h - 2:00 hr.

*1x 10kWh RDT battery.

POD 11.0

5.0 km/h - 6:00 hr.

9.0 km/h - 4:00 hr.

13.0 km/h - 2:00 hr.

*2x 10kWh RDT battery.

POD 15.0

5.0 km/h - 6:00 hr.

9.0 km/h - 4:00 hr.

15.0 km/h - 2:00 hr.

*2x 10kWh RDT battery.

*Tested on a 8 meter, 2500kg sloop. For more reference project please contact sales@rimdrivetechology.nl

POD 15	POD 25	POD 30	POD 50
15.0	25.0	30.0	50.0
48	96	110	400 - 550
22	70	70	75
195	350	400	750
Yes	Yes	Yes	Yes
Yes	Yes	Yes	No

Steerable POD

Zero turn steering for ultimate maneuverability

Characteristics

Electric propulsion

Minimized components

Low in maintenance

One day installation

Joystick, steering wheel or CAN

Electric or hybrid

Integration

New build or retrofit

Custom made projects

*Motor power is depending on water conditions, usage and installation.

**Will be less for 24V installations.

Steering types

Joystick

With a joystick steering system, you can effortlessly and intuitively control your boat by simply moving the joystick in the desired direction. It provides precise maneuverability and allows easy turning.

CAN (digital)

The boat control is electronically managed through a Controller Area Network system. This advanced system utilizes digital signals to optimize engine control and steering behavior, resulting in accurate, responsive, and reliable boat steering.

Steering wheel

With a steering wheel control, you have a familiar and traditional way of steering your boat. The steering wheel offers a comfortable grip and makes it easy to adjust the boat's course with smooth and precise steering input.

The next evolution in boat control

Zero turn

The steerable POD offers unparalleled manoeuverability and control, making navigating tight spaces and challenging water conditions effortless.

Steerable POD 25	Steerable POD 30	Steerable POD 50

*Motor power is depending on water conditions, usage and installation.

**Will be less for 24V installations.

Extreme efficiency

Our outboard motors can produce high torque, a valued feature among the owners of heavier boats. Combined with fast response time, and saltwater compatibility Rim Drive motors can be equipped in many applications.

Outboard engines offer versatile compatibility with various steering cylinders, featuring a convenient motor controller in the top cover, and provide a complete trim and tilt functionality for precise maneuvering and effortless control.

Reference project

Type Tour boat	Length 11 meters	PAX 32 pers.	
Motor 2x outboard 11.0	Weight 3500kg	Cruise speed 12 km/h	
Battery capacity 40kWh	Run time 5 hours	Power at cruise 2.6kW	

(2x) Outboard 11.0

Standard bow thruster

The best solution for continuous running times

Characteristics

Electric propulsion

Extreme power

Low in maintenance

Integration

New build or retrofit

Custom made projects

Specs

	Standard thruster 0.5	Standard thruster 3	Standard thruster 5	Standard thruster 8	Standard thruster 11

Nominal voltage (V)	48	24 or 48	24 or 48	48	48
Weight (kg)	2.5	3.5	5	14	14
Static thrust (kg)**	5.5	23 / 25	50 / 55	120	140
Salt water resistant	Yes	Yes	Yes	Yes	Yes
Controller included	Yes	Yes	Yes	Yes	Yes

*Motor power is depending on water conditions, usage and installation.

**Will be less for 24V installations.

Features

Our standard thruster is the most quiet bow thruster on the market. The bow thruster is efficient and also available as a stern thruster.

The standard bow thruster is extremely compact which makes it possible to place it further in the nose of the boat.

Compability per boat length (m)

Choosing the right electric motor for a boat is crucial for optimal performance and efficiency on the water. In the table below, the compatibility per boat length is shown.

Standard thruster 15	Standard thruster 25	Standard thruster 30	Standard thruster 50
15.0	25.0	30.0	50.0
48	96	110 or 400	550
21	70	70	73
175	300	350	675
Yes	Yes	Yes	Yes
Yes	Yes	Yes	No

Bow thruster tunnel set

A strong stainless steel provides a robust solution for bow thrusters

Characteristics

Electric propulsion

Extreme power

Low in maintenance

Tunnel installation

Integration

New build or refit

Custom made projects

Specs

	Tunnel set 3	Tunnel set 5	Tunnel set 8	Tunnel set 11
Diameter tube (mm)	114.3	168.2	256	256
Weight (kg)	5.5	8	25	25
Material*	RVS	RVS	RVS	RVS

*On request, other materials are also available such as steel, aluminium and glass fiber.

Features

The tunnel set is easy to integrate into the boat. The bow thruster tunnels are easy to install due to the various mounting options

The tunnel set is specially designed for difficult conditions where the bow thruster remains protected.

Tunnel set 15	Tunnel set 25	Tunnel set 30	Tunnel set 50
256	355.6	355.6	355.6
32	100	100	103
RVS	RVS	RVS	RVS

Bow thruster box

The bow thruster box makes it easy to access the motor

Characteristics

Electric propulsion

Extreme power

Low in maintenance

Closed box installation

Integration

New build or retrofit

Custom made projects

Specs

	Bow thruster box 3	Bow thruster box 5	Bow thruster box 8	Bow thruster box 11	Bow thruster box 15
Tunnel diameter (mm)	086	133	212	212	212
Weight (kg)	5.5	7	16	16	23
Material*	RVS	RVS	RVS	RVS	RVS

*On request, other materials are also available such as steel, aluminium and glass fiber.

Features

This motor boasts easy removal from its box, even when above the waterline, avoiding the need to take the boat out of water.

Its standardized tunnels allow straightforward installation ensuring waterproof and adequate cooling for the bow thruster.

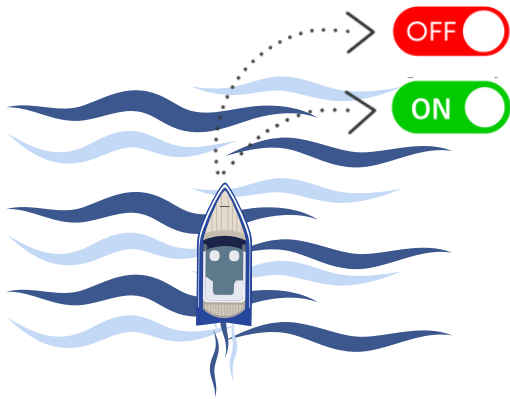

RIM DRIVE TECHNOLOGY

System functionalities

Our system features improve the experience, efficiency and safety for the user. We offer the following additional functionalities: steering sensitivity mode, side-shift parking mode, zero turn steering and magnetic compass.

Steering sensitivity mode

With this function the sensitivity of the throttle can be determined by a single button. This function makes it possible to steer very accurate in smaller spaces.

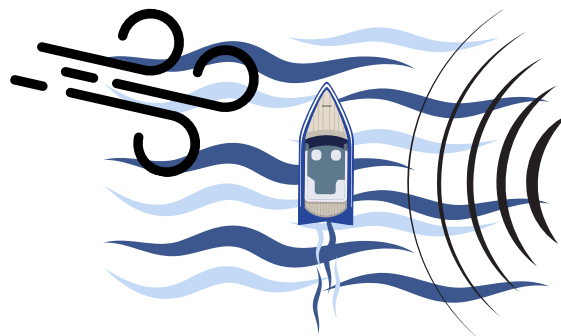

Side- shift parking mode

A parking function on a boat is crucial when docking. It provides precise control and stability, allowing for safe and easy boat parking.

Zero Turn steering

Differential steering makes it possible to rotate on your position with two fixed pods. We have realized an algorithm which calculates which motor should run in forward or reverse mode and at which RPM.

Magnetic compass

This feature corrects currents and wind influences, making it possible to sail a straight course for a long time. It minimizes deviations and provides a relaxed and stable sailing experience.

Our unique batteries

The high energy density, combined with no maintenance costs and affordable pricing makes these batteries the perfect candidate for those who wish to be powered electric. There are multiple technical advantages of our batteries that make a Rim Drive Technology battery a pleasure to use.

Why a Rim Drive battery?

A Rim Drive battery has a high **energy density**.

Our **lightweight** and **powerful** batteries use the **latest technology** for incredible weight savings.

Due to the **minimal dimensions**, the battery can be used for many applications.

Our batteries are **maintenance-free**, so no service attention is required.

To provide the best customer experience, our batteries work **efficiently** with all our products.

New generation

All batteries have an integrated BMS. The batteries can be connected up to 4 pieces in parallel.

With our new generation of LiFePO4 batteries, we aim to make the use of batteries both easy and affordable.

In case you want to have high voltage batteries, please contact our sales team.
